

# Cody B. Jeu, MD

## Healthcare in the Family

"Growing up I had medical professionals in my family. My mother was a nurse and my stepdad was a navy corpsman. As I got older I shadowed doctors in a variety of specialties. It's a great way to confirm medicine is something you would like. I look forward to having interested students shadow me."

## Finding Rewards in Giving Back

"I've enjoyed doing mission work. As a medical student, I went to Nepal. I also did a mission to Kenya, where in five days we screened and treated 400 patients. It makes you see you can do a lot with less and I believe it makes one a better clinician and surgeon, too."

## A Special Interest in the Thyroid

"I really enjoy thyroid surgery. These procedures are really rewarding cases for a surgeon as they provide a good level of complexity without being a long surgery. Most importantly, I can help many people, whether it's malignant or benign."

## A Native Texan Returns

"I was born in Houston, but I grew up in a military family, so we moved around a bit. Eventually, my family settled in the Houston area. Plus my wife had family here. So after I completed my training, we came back to be with family in the next stage of our lives."

### Memberships

- American Academy of Otolaryngology-Head and Neck Surgery
- American Medical Association
- Texas Medical Association
- Chicago Laryngological and Otological Society
- American Hearing Research Foundation Resident Grant Recipient Researcher

### Education

- Residency, Department of Otorhinolaryngology – Head and Neck Surgery, University of Illinois, Chicago, IL
- Doctor of Medicine, University of Texas Medical Branch, Galveston, TX
- Bachelor of Science, Organic & Biological Medicinal Chemistry, Rice University, Houston, TX
